Keyblind x Claude Code

Keyblind is now a native Claude Code skill

The agent self-discovers how to keep your keys safe.
keyblind.devblind AI to your keys

The problem

Agents can't tell the difference between code and secrets, so plaintext leaks into transcripts.

What a skill is

A small prompt bundle the agent loads on demand. No config, no guessing.

What it teaches the agent

Store encrypted, resolve at runtime, sandbox .env, never echo plaintext.

The moment it fires

The user asks to store or use a key, the skill shows the safe path automatically.

Keyblind
06 / 08

Why runtime resolution matters

The decrypted value is injected just in time, never written to the conversation.

The stack

AES-256-GCM vault, 27 MCP tools, zero network, zero telemetry.
