Keyblind
01 / 08
New command

setup-mcp --local

Commit your agent's secrets vault config to the repo.
keyblind.devblind AI to your keys

The old way

Each dev hand-wires MCP config in their own $HOME.

keyblind.devblind AI to your keys

Keyblind
03 / 08

The new way

Config lives in the repo; anyone who clones it is covered.

keyblind.devblind AI to your keys

What gets written

.cursor/mcp.json, .windsurf/mcp.json, Copilot, Cline.
keyblind.devblind AI to your keys

Safe to commit

The file holds only keyblind start, never a secret.

Idempotent

Re-run it; it merges without clobbering existing servers.

The shift

Secret hygiene moves from "someone remembered" to "the repo enforces it."

Try it

keyblind setup-mcp --local --editors cursor,windsurf
keyblind.devblind AI to your keys
